

Your All-In-One Processing & Imaging Solution

Mid Atlantic Processing started with a great idea and made it even better! We took our proven, performance-driven ValuePak terminal and added what today's forward-thinking merchants continue to demand most: reliable, turnkey check imaging and archiving in a compact, all-in-one POS solution.

Presenting the next generation in payment processing: **The Nurit ImagePak.**

Partners at Point-of-Sale

Manufactured in association with Lipman, and incorporating MagTek imaging technology, Mid Atlantic Processing's **Nurit ImagePak** integrates electronic capture, storage and retrieval of scanned checks and sales receipts right at point of sale. Like its counterpart, the **Nurit ImagePak** also offers friendly and intelligent menu screens to guide users through a simple and intuitive interface. All types of payment transactions are rapidly processed with just a few easy keystrokes: check, credit, debit, EBT, loyalty, Smart Card and more. Built-in business management reporting keeps merchants in the know.

Based on a Value Producer

Based on its proven ValuePak predecessor, the **Nurit ImagePak** combines terminal, check reader/scanner, printer and pinpad all into one space-saving unit, with a smart and convenient swivel base design. There are no multiple components to connect, no tangled cables to contend with and no frustrating incompatibilities to slow up service and productivity. The result: easier, efficient paperless management of daily transaction records. The first product of its kind, the **Nurit ImagePak** packs a reliable, turnkey check imaging and archiving system into a compact, all-in-one, countertop solution that operates at Internet speed.

Mid Atlantic Processing provides the "Partial Download" needed for the "Check Service" process, as well as all technical support for our ValuePak equipment. The Partial Download is designed to integrate with all Credit Card Processing Downloads. Full download and deployment can also be supported via Mid Atlantic Processing facilities. Nurit 3020 modem speed: 14,400K. Refer to our Web site for additional technical specifications.

Nurit ImagePak Features

- Low-cost, all-in-one terminal solution
- Highly reliable 20-button ergonomically designed keypad
- Small footprint
- 2 MB flash (min.), extendable
